

NEWS FROM NIUE

Three grid-connected PV systems were installed in Niue in July. The systems were installed as follows:

- A 1.7 kWp system on the roof of the office building at Niue Power Corporation (NPC)
- A 20 kWp system on the roof of one of the High School buildings
- A 30 kWp system mounted on a ground installation at the Hospital.

In coordination with the installation of the systems, a grid-connected PV training workshop was carried out for NPC staff to attend. The workshop was also attended by 6 participants funded by the PIGGAREP project. The workshop was very successful in teaching both the theory and practical steps in PV system installation and operation.
